

WonderBeats ReadMe:

\*\*\*\*Installation: \*\*\*\*

Download and install xampp. Once downloaded, open the control panel and start apache and MySQL.

Place source file inside of C:\xampp\htdocs\project

Place data file inside C:\ProgramData\MySQL\MySQL Server 8.0\Uploads\Data

In web browser search for: localhost/dashboard

Select phpMyAdmin. Next, create a new database called wonderbeatz.

Once created, select database and on the top menu select import. Import the create.zip followed by the load.zip.

The Wonderbeatz application is now installed and ready to run.

To access the login page, open a web browser and enter localhost/project/login.

\*\*\*\* User Manual: \*\*\*\*

For listeners:

Use the login screen to either login or create a new account.

Once logged in, you will be directed to your homepage which will display all playlists created by you

From the home screen, you can add a new playlist, delete a playlist or modify a playlist.

To modify a playlist, enter the name of the playlist and click the search playlist button. This will direct you to a screen with info for that playlist. On this screen you can return back to the homepage or modify the playlist. To modify a playlist you select the appropriate button and will be directed to the modify playlist screen. From this screen you can search from all the songs with the search songs button, or you can add and delete songs with their respective fields.

From this page you can go back to the playlist page or back to you home screen

For creators:

Use the login page to create a new account or login to an existing account.

Once logged in, you will be directed to your homepage.

This screen will display all the songs you have published along with their information.

From your homepage you can add a song, delete a song, or modify a song. Each of these features has its own button. On each of these respective pages it will indicate which fields it needs you to fill out before submitting your changes.
